

- no system purchase
- no installation cost
- no maintenance fees
- no permit hassles
- no performance worries
- no rate increases

rēthink[®] solar

Citizenrē | Bringing Solar Power to Your Home

- Citizenrē lets you put solar power on your roof without having to purchase an expensive system. Why invest thousands of dollars when you can enjoy the same benefits at no risk?
- We design the perfect fit for your home. Never over-engineered, so your PV system meets 100% of your needs and looks great!
- Our performance guarantee means that your solar system will be online all the time. If not, we provide the maintenance free of charge and you don't pay for it to just sit there.
- What's more, our offer means you avoid those never ending rate increases. A penny saved is a penny earned!
- Solar energy is safe and smart; and if it also means that you are helping our economy, our environment, and our national security, then isn't it time to rēthink solar?
- Call one of our Associates today. Or visit our website. We look forward to bringing solar electricity to your home.

Solar power is a significant step toward energy independence and a huge step in preserving our environment and protecting our national security from dependence on foreign oil

Citizenre makes it easy and affordable for any homeowner to take that step

Citizenrē pays for, installs, owns and operates the solar Residential Energy Unit (REnU).

All you do is pay for the electricity generated from your panels. Your contract rate for this electricity is based on the average rate for your utility during the prior year. We “lock in” this rate so that it never goes up for the entire duration of the contract, up to 25 years. We give you back your power, you produce your own electricity, and you keep the savings every month. Here are some of the benefits you receive:

- No upfront investment
- No waiting for rebates
- Citizenrē obtains all permits and handles engineering, procurement, and construction
- You only pay for what is delivered. Since the solar power you generate reduces your need for energy from your utility company, your net payment will be equal to, or less than, what you are paying now
- Hassle-free operating and maintenance
- Hedge against future utility price increases by locking in your electricity rates from the solar system for up to 25 years

After you sign up on our Independent Ecopreneur website (or ask him or her to do this for you), you will receive a Forward Rental Agreement (FRA) to sign, with the terms for your Residential Energy Unit (REnU). When Citizenrē is ready to install your panels, an engineer comes to you to design the final system. If you decide then to install the REnU, you pay a security deposit, usually \$500, that you will receive back with interest at the end of the contract period.

Your rent for a REnU is based on how much power it generates. Since the fuel supply (sunlight) is free and very little maintenance is required through-

out its lifetime, Citizenrē rents to you at a fixed rate for the contract period you sign up for one, five, or 25 years. Your REnU rate is “locked in” at the time of signing an FRA.

Citizenrē engineers a REnU system that will meet your exact needs based on your electricity usage, obtains the permits, procures the equipment, installs the system, and integrates it with your utility company.

Citizenrē monitors your REnU electronically to make sure it performs at its optimum capability. We have a vested interest with the performance of your REnU. If it doesn’t generate electricity, you pay nothing!

At the end of each month, Citizenrē will provide you with a bill, that tells you how much electricity your REnU has generated. Your rent is equal to your contract rate times the electricity generated.

The Citizenrē Corporation has designed a business that delivers the REnU to you under the best possible conditions. Citizenrē uses only the finest components to make up the REnU. It is professionally installed and maintained by our team of dedicated engineers and technicians. And with a performance-based rental contract, you receive the strongest form of system warranty available.

You need not be concerned with:

- Potential system failure
- Warrantee assurance from equipment providers
- Whether your choice to switch to solar power was right or not, since you don’t have to make a large technology investment

Through the REnU program you are virtually able to eliminate your risk in adopting solar power.

If you want to help clean the environment, stem global warming, strengthen the energy grid, support national security and energy independence, while you also become energy independent yourself and hedge against rising energy costs with a fixed-price rental contract, then sign up now and...
